09/2018 **07/2021** Bologna	**Bachelor Degree in Physics :** I graduated with 110/110 with a thesis on the Loiano's Telescope Optimization for space debris detection.
11/2020 Bologna	**I joined the Unibo Motorsport Autonomous Driving Team**
09/2021 **10/2023** Bologna / Trondheim	**Master Degree in Artificial Intelligence :** I graduated with 110 L /110 with a thesis on an autonomous driving system for sailing boats. I have spent the second year in Trondheim (Norway) at the NTNU university thanks to the Erasmus project.
11/2023 **Now** Bologna	**PhD in Computer Vision applied to Autonomous Driving :** I started my PhD focusing on End-to-End autonomous driving systems, ending up publishing at ICRA 2025 my first research paper: *Drive with the Flow.* After that work I entered the world of event cameras focusing on stereo depth estimation. I have published a paper at ICCV 2025: *Depth AnyEvent: A Cross-Modal Distillation Paradigm for Event-Based Monocular Depth Estimation* and a journal paper in IET Image Processing (2026): *Towards Event-Based Stereo Depth Estimation at Millisecond Resolution.*
09/2024 Bologna	**I become the Unibo Motorsport Autonomous Driving 1:10 scale Car Team Leader**
05/2025 Atlanta	**My team and I won the RoboRacer Autonomous Driving World Championship at Atlanta U.S.A.**
03/2026 **08/2026** Gothenburg	**Visiting PhD at Chalmers University of Technology :** six-month research period on metric monocular visual odometry for runners in forest environments.
06/2026 Vienna	**My team and I got the second and third position at the RoboRacer Autonomous Driving World Championship at Vienna Austria**
